THE BBD100 PERSONAL BED BUG DETECTOR HAS BEEN APPROVED BY THE GOVERNMENT OF THAILAND

The Government of Thailand has completed its tests and approved the BBD100 Personal Bed Bug Detector as an accurate instrument for finding bed bugs in government agencies.

After its approval, Aunnop Wongtitirote, President of Ikari Trading (Thailand), Ltd. and his professional crew tested 30 buses at the Bangkok, Thailand bus terminal on August 4, 2011. The government transport officer was present at all times as an observer. Eleven of the thirty buses tested with the BBD100 were found to be infested with bed bugs and these were fumigated at once. There are 200 more buses to check just in Bangkok and when these tests are completed the team will

**Growing company
introduces
new retail product**

When Termite Detection Systems (TDS) owner William Moyer first came to the SBTDC for start-up assistance back in 2002, he had a strong patent for his non-invasive termite detection system but no product to sell and no business experience. He worked with UNCW SBTDC business counselor Jim Howell to launch his business.

His product is now being used by commercial pest control firms domestically and internationally. In 2010, William discovered that his system also detects bed bugs, which are a growing problem. After reviewing the potential, he developed a product for retail sale to consumers, which was launched in April 2011.
